Narviflex Conveyor Belting & Plastics Group

The DoNarCo Conveyor Belts and Plastics Group was formed after Dovesco (Domo Investment Group) joined the capital of the Narviflex Group in March 2020, with a view to further growth in Europe in Conveyor Belt Service, Conveyor Belt Production and Industrial Plastics.

In January 2021, a pvc/pu lightweight conveyor belt factory and confection plant was acquired in the Alkmaar region (the Netherlands). This factory produces for the Narviflex sites and for external customers worldwide.

In March 2021, a new step towards additional customer service and proximity was taken by adding Zeeland Belting Service (ZBS) from Rilland, The Netherlands, to the DoNarCo Group, as an additional Narviflex service location.

In this brochure, we present you our DoNarCo Group, with the following key points:

- Unique products from our own production, with basic materials of European (often Dutch and German) origin
- Unique 24/24h service, seven days a week
- Huge inventory to help customers quickly
- We stand for service and help everyone with small and large series
- Proximity : branches spread throughout the Benelux. Installation teams in every area.

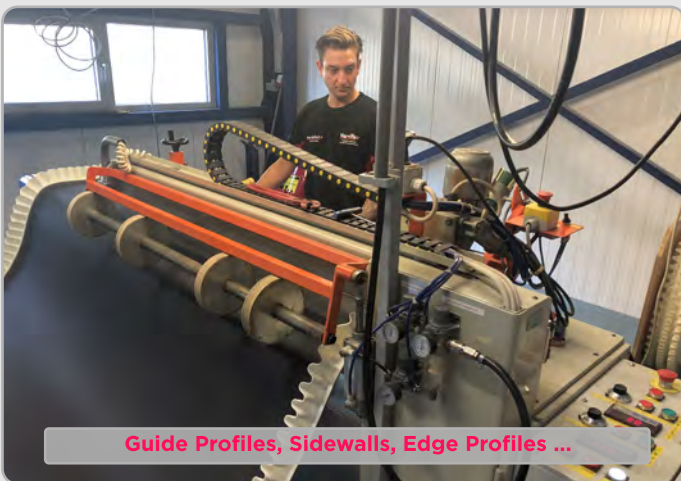

PVC/PU Lightweight Belting

In each of our locations we have stock and machines to quickly make pvc/pu lightweight conveyor belting for you. Our very extensive stock and machinery are located in the production units in Geel (B) and the Alkmaar region (NL). All current operations, such as guide profiles, cleats, closed edges, sidewalls, vacuum holes, laggings, etc. are carried out quickly and professionally, starting from European origin conveyor belts.

Cutting pvc/pu lightweight conveyor belting with the most modern Zünd CNC cutting plotters

Guide Profiles, Sidewalls, Edge Profiles ...

Each type is cut several times a day

Our PU conveyor belts are always European and made on modern calenders

Lightweight Belting - Specials

Our production unit is located in the Alkmaar (NL) region, where we make conveyor belting and specials for ourselves, other conveyor belting companies and machine builders. Our factory is focused on production and does not target end users. However, your nearest Narviflex Branch will choose the best production location for your project and, as a sister company, has direct, fast and unlimited access to this production unit.

Conveyor Belts

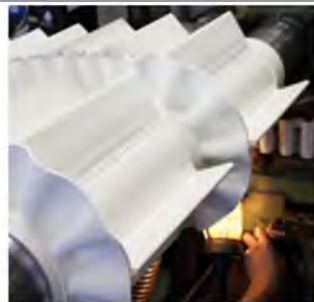

Lightweight conveyor belting in PVC, PU, PE and Silicone. Open pieces and Confectioned belts.

Fabrication / Confection

Do you need a fully confectioned conveyor belt?

Our factory in the Alkmaar region has one of the most extensive conveyor belt confection workshops in Europe.

Accessories

Conveyor belt accessories such as cleats, guides, sidewalls and closed edges can be installed on a flat belt to ensure that the belt does its job properly. We deliver these accessories separately or apply them to a flat conveyor belt according to your specifications.

Gauze and Gauze Belts

We supply gauze and gauze belts in various mesh widths and dimensions. With us you will find both raw mesh and custom-made gauze belts, with edge and transverse reinforcement and possibly fitted with flights, guide strips, timing belts and / or sidewalls.

Extra Cover Coatings

Sometimes there is no standard conveyor belt type for an application. In such a case, adding an extra coating on our factory's own coating line can provide a tailor-made solution.

Profile Embossing

Our factory supplies smooth conveyor belts and conveyor belts with a profile. We also apply profiles to part of a full roll of conveyor belt on our own profiling machine. The possibilities are endless and can be arranged completely according to your wishes.

Curve Belts

Round conveyors, also called curved conveyors, require a very precisely manufactured conveyor belt. The slightest deviation in design or finish can lead to major problems when using the conveyor. You will also find these specialist conveyor belts for round conveyors within the Narviflex Group.

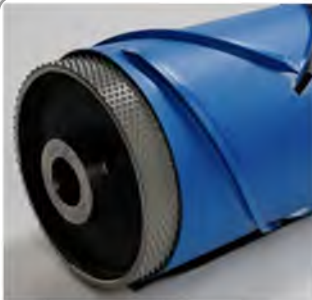

Pinte Belts

The different types of pinte belts from our factory combine the flexibility of plastic conveyor belts with the strength of the rubber 'fingers'.

The Narviflex Group can make any possible conveyor belt, from its factory in the Netherlands. We produce custom conveyor belts for you and your application!

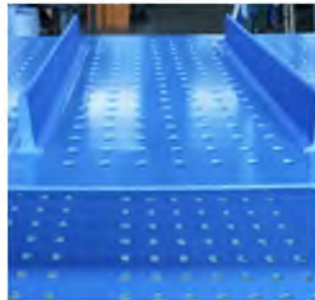

Lightweight Belting - Specials

Did you know that of the production lines "Conveyor Coating" and "Conveyor Profiling", there are only two in the world? In our factory in the region Alkmaar we have both. That makes us unique and you, as a customer, can source everything, especially "The Specials".

Friction and Lagging Materials

Lagging material for lagging drive drums and return drums is available from Narviflex with various profiles. We can also cover your drive drums and return drums for you.

Computer-Controlled Cutting

The Narviflex Group cuts materials up to 6 mm thick in any desired shape on their fully computer-controlled Zünd cutters/plotters. Intricate designs and large series can be cut with great precision for you. Thicker materials are cut on the 3D Waterjet.

Agricultural Mechanization Belting

Our factory has been making conveyor belts for the large machine builders active in agro-mechanisation for 25 years. You can also contact the Narviflex Group for replacement belting for these machines. Today, machine builders of food and recycling machines are also among our largest customer groups.

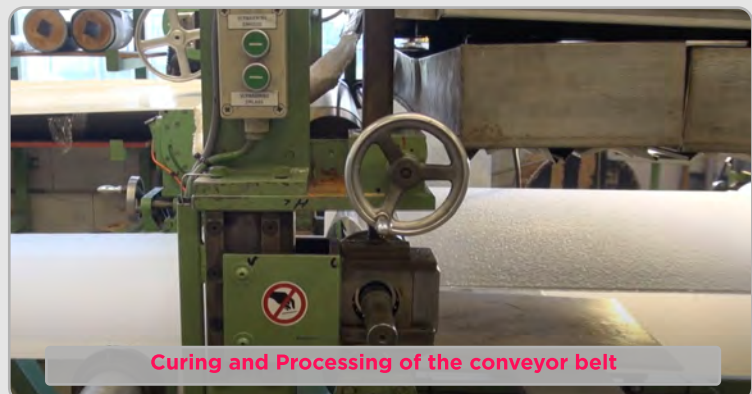

PVC Coated Canvas

We supply tailor-made products made of strong and wear-resistant PVC fabric for various applications in agriculture and horticulture. We have rolls of different fabric weights and colors in stock.

We also have 3D waterjet technology, where we can cut through materials of any thickness.

Extra Coating of Conveyor Belting Covers

Curing and Processing of the conveyor belt

Pillow Belts (They do not harm the product)

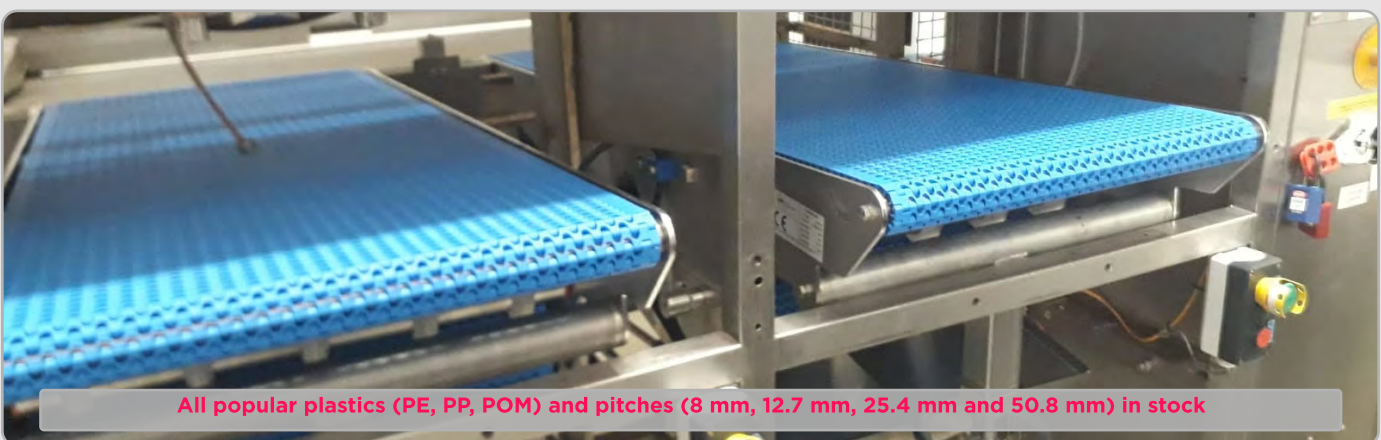

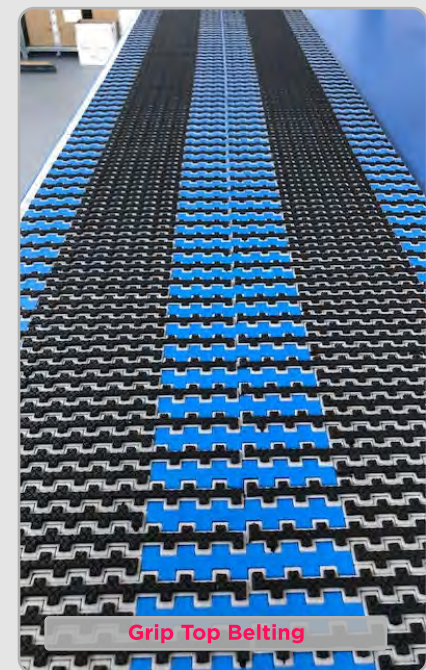

Rounded chevrons for smooth running

Our factory is located in the Alkmaar region, not coincidentally the region where the plastic conveyor belt was invented. We still have this expertise in our factory.

Modular Belting

Our production unit for modular belting is located in Drachten (NL). There we stock all sprockets and modules of the top brand Modutech. When you order a modular belt, it is (very quickly if necessary) assembled according to a laying pattern developed by a special computer program. Everything is possible, flat belts, flush grid with flights, side plates, grip-top modules, etc.

modutech.narviflex.be

Timing Belting - Special Belting

In our production units, we cut, join and lag timing belts for you, from our large stock. Most sizes of timing belts from sleeves are also in stock (endlessly extruded, so without joining). We also process, supply and assemble PTFE conveyor belts, metal mesh belts and elevator belts. The Volta round and V-belt range in PU is also in stock and can be delivered quickly.

We join and lag In-House

Extruded Round and V Belting in PU

Elevator Belts, Buckets and Bolts

Draw-Down Belting

Volta SuperDrive Specialists

Metal Mesh Belting

Rubber Conveyor Belting

We have 2 lines of Rubber Conveyor Belting :

- Rota Belting: our own developed line of rubber conveyor belting, which we produce mainly in Europe under license and under the control of our rubber lab. These meet the highest anti-wear class according to DIN 22102 type W. Usually there is only the "medium" quality, type Y, on the market.
- Dunlop (Michelin Group) : almost the entire range of Dunlop (production in Drachten NL) is in stock at Narviflex, so that customers can be served quickly, day and night and also for smaller quantities to very interesting prices.

Each subsidiary has intervention stock. We have buffer stock for the group in Geel, Ghent, Venlo and Rilland.

Modern vulcanization presses

Special production at the most interesting conditions

RotaBelting.eu - Our Own Narviflex Range

Rubber Conveyor Belting Dunlop

In each service branch we have Dunlop rubber conveyor belt material in stock, supported by the very large stock in Geel (B), Ghent (B), Venlo (NL) and Rilland (NL). Our group stocks almost all types of Dunlop, at any width up to 2 m wide. Narviflex is Approved Service Partner of Dunlop (Michelin Group), this means factory support and warranty on the belts. With us you are also assured of the best conditions for these Premium Rubber Conveyor Belts from Dutch production.

We are also one of the co-developers of the Straight Warp rubber conveyor belting and finger-joining technology. The Dunlop Straight Warp rubber conveyor belts last significantly longer than the classic multi-layer EP belts and can have a lifespan from 3 to 5 times longer, as they are significantly more tear and impact resistant.

We have an excellent relationship with the Dunlop factory in The Netherlands.

Narviflex chevrons on Dunlop belting material.

We can make hot longitudinal splices.

dunlop.narviflex.be

Rubber Conveyor Belting

Hot Vulcanised Belt Confection

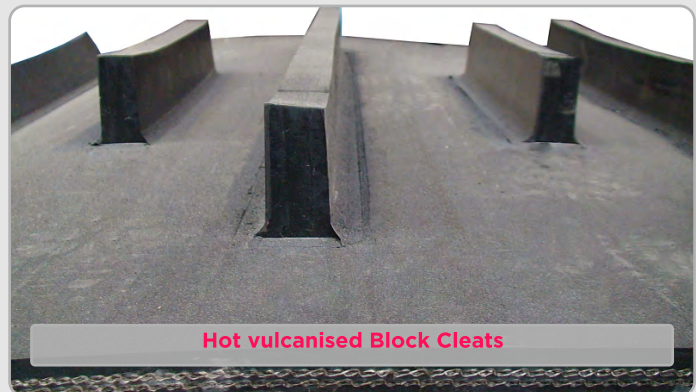

Narviflex is one of the few companies that install in-house rubber cleats and chevrons by means of hot vulcanization. This way you are assured of top quality, against interesting conditions and a fast delivery time. Our heavy and modern "VulcaBeast" press is our pearl : on this press we make non-standard chevron belts day and night, such as chevron belts with bare back (fabric running side), on large width (up to 2 m) or chevrons on thick and strong conveyor belts, as the standard chevron belts often do not comply for heavy duty applications.

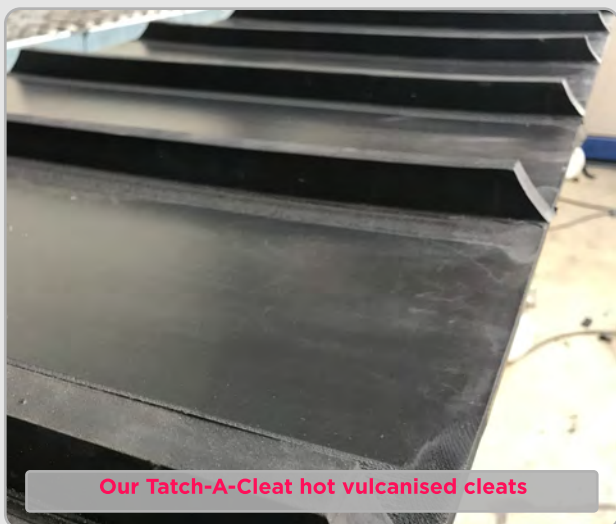

On our VulcaBeast presses we can do in after-vulcanisation cleats and chevrons by hot vulcanisation

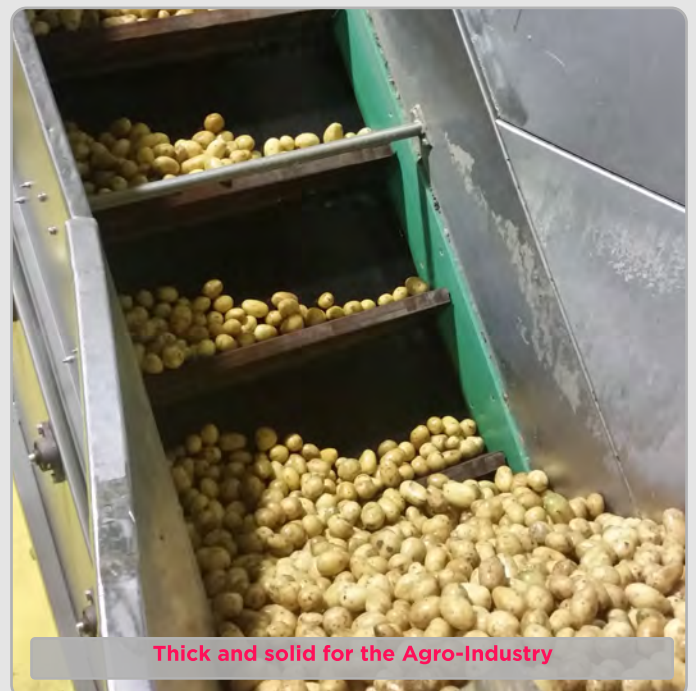

This chevron belt lasts 5 times longer

Hot vulcanised Block Cleats

Our Tatch-A-Cleat hot vulcanised cleats

Thick and solid for the Agro-Industry

Lagging & Coatings

In our "Lagging & Coating" department, we process all kinds of materials and drums with rubber, PVC or polyurethane coverings / coatings. Depending on the application and the material to be lagged/coated, this is done by:

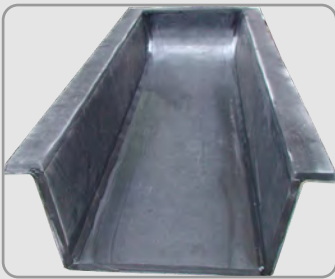

- high quality multiple layer gluing process
- spraycoat (hotspray poly-urethane)
- hot vulcanization

The base materials are always manufactured by top-quality suppliers Trelleborg, Nitta, Dunlop, ...

In this department we also manufacture funnels and compensators.

Narviflex has hotspray equipment to coat your materials with polyurethane in our spraycoat units in Geel (B) and Venlo (NL) :

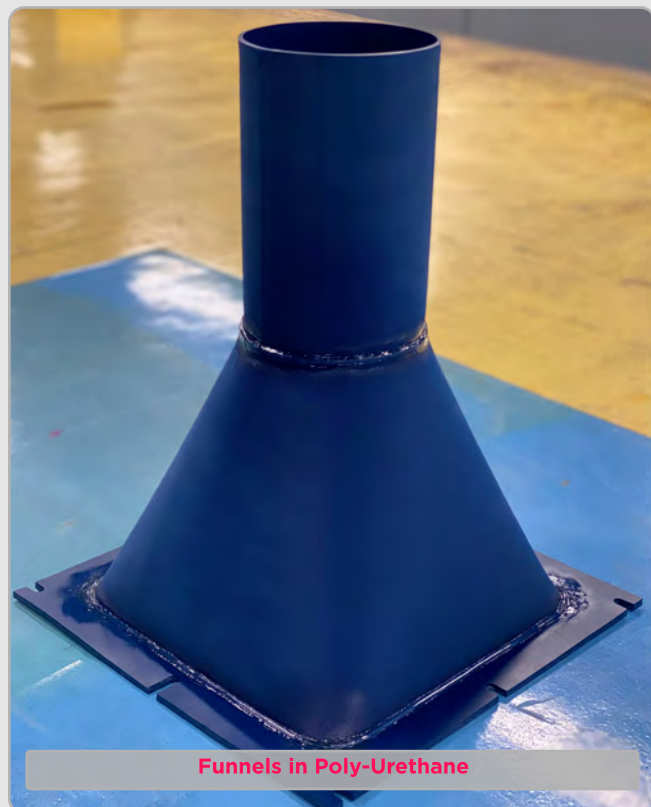

- Significantly increases wear resistance
- Makes the material less sticking and ensures a better product flow
- Oil and grease resistant, resistant to many chemicals
- Prevents corrosion and seawater-resistant
- The polyurethane coatings are EU food approved for unpackaged food products

Lagging of drums in all our branches

Poly-Urethane hot spraycoat

Funnels in Poly-Urethane

Widely used in the automotive industry

Rubber Products - Waterjet

We stock a very significant part of the Trelleborg rubber sheeting range and this in all thicknesses, even up to 100 mm thick. You can order it as a full roll or cut to strips. We also have a 3D waterjet, which can cut from CAD drawings complex cutting patterns and this for small to very large series.

We cut and process by waterjet for many machine builders (OEM) rubber strips, already provided with all cuts and slotted holes, so that they can be installed on the machines ready for use.

STM Waterjet 3D - Can also cut at an angle

Reinforced rubber strips

Complicated waterjet cutting

Our CAD designers prepare the drawings for the cutting machines

Cutting from your CAD File

Trelleborg Yellowfine - High elastic abrasion resistant rubber

Strips - CNC Cutting

Besides CNC cutting on our waterjet (for thicker materials), we also have 3 Zünd CNC cutters to cut thinner rubber, polyurethane and PVC. This can be done in strips, with holes, but also we manufacture by these machines funnels and compensators.

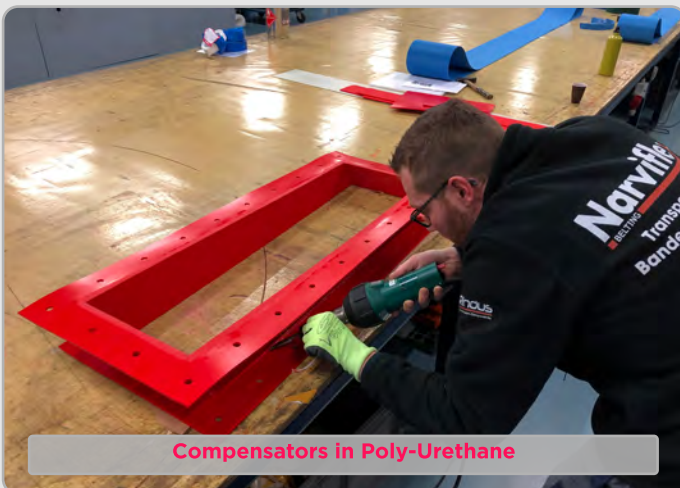

The DoNarCo Group has developed in-house a range of polyurethane (Narvistar), of white, blue and red color, food approved, in 60 sh A, which are a better alternative to rubber, in terms of oil and grease resistance, chemical resistance, mechanical strength and cleaning in the food industry.

Narvistar PUR 60 - Replaces rubber

Blue Silicone - EU Food Approved

Compensators in Poly-Urethane

Drop Cloths for the Agro Food Business

Zünd ultrasone cutting

Zünd high volume milling

Idlers and Pulleys

We supervise, make the CAD drawings, check the quality and have our idlers and pulleys made in a very modern factory in Romania :

- Modern, with CNC machines and welding robots
- Qualified employees
- Own rubber hot vulcanization department
- Lots of stock in base pipes for making idlers and pulleys
- Large capacity and acceptable delivery times
- Inimitable, interesting prices !

Narviflex NBL - Coated idler for the bulk industry

Narvigreen HDPE idlers : wear resistant and anti-sticking

Side Guide Idler in PU

Narviflex is distributor and service-centre of Interroll

Components

Of course we have a wide range and stock of components to improve your conveyor belt installations and chutes. Included in this range : scrapers, guide rollers, lacing and everything that makes the conveyor belts run (better). We are also licensed distributors of Martin Engineering, MLT (Minet Lacing Technology) and Flexco.

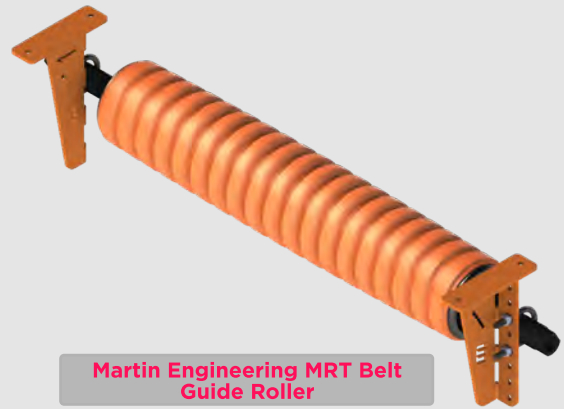

ISC - MLT vulcanised splice which can be bolted to an endless belt on location

Flexco lacing

Anker lacing

Martin Engineering MRT Belt Guide Roller

Martin Engineering Scrapers

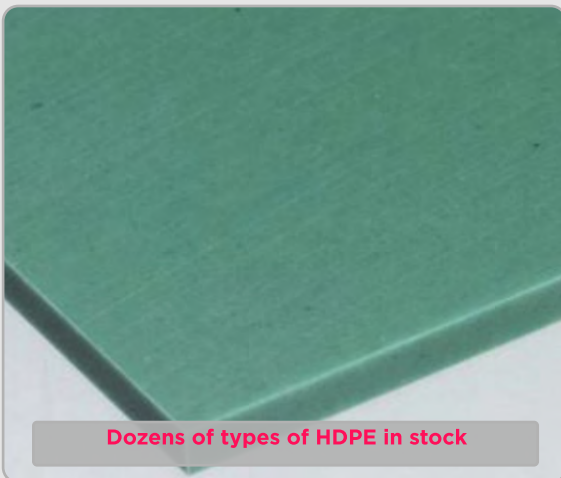

Master Cleaner - Budget-Friendly high performance scraper

www.narviflex.eu - Overview Components

Narviplastx Semi-Finished Products

In our Narviplastx (Industrial Plastics) locations in Geel (B) and Ghent (B), we stock all popular plastics, in all thicknesses and colors, in sheet form and rod form. You can order these plastics as complete sheets, but also cut to size for you in our modern sawing lines.

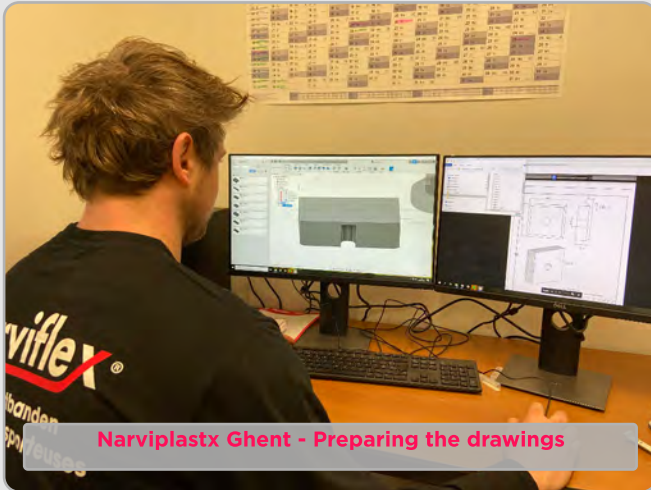

All our products are European!

www.narviplastx.eu

Narviplastx - Finished Products

If you need machine parts or pieces in plastic, we will be happy to saw and process them for you in our modern production units in Geel (B) and Ghent (B). Send us your CAD drawing or model and we will do the rest. Lead times can be fast, because we have all basic materials in stock.

Narviplastx Ghent - Preparing the drawings

Narviplastx Gent - CNC Milling

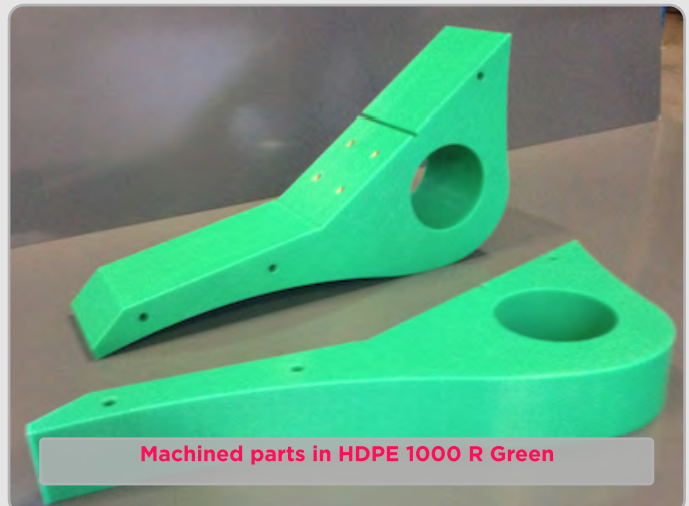

Narviplastx Geel - Milling small and large series

Narviplastx Geel - Multicam CNC milling

PTFE Seals / Rings

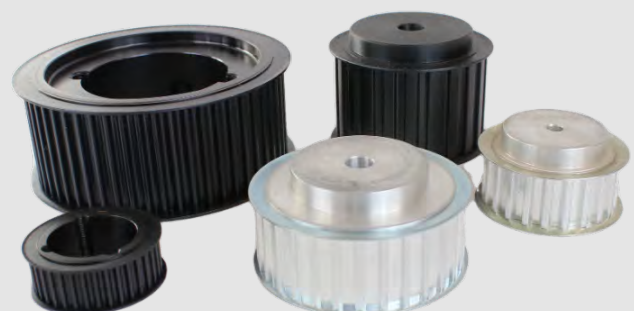

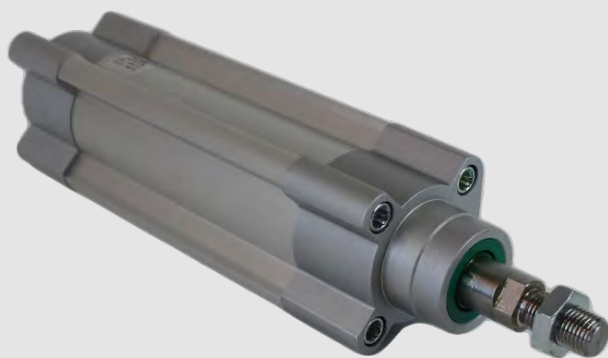

Machined parts in HDPE 1000 R Green

Fast delivery time - Made from our stock

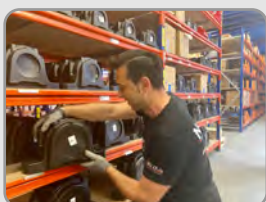

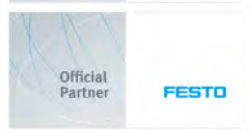

Rindus - Transmission Components

Rudi Ramaekers, the "Founding Father" of Rindus and the Narviflex Group have been working together for many years. So when Rudi decided to start a new transmission components company, the collaboration became intense and official and both companies formed a strategic alliance. Narviflex sells Rindus products and can always rely on the large stock of transmission components from Rindus and Rindus uses the service technicians and facilities of the Narviflex Group. Both groups also share locations, such as the buildings and warehouses in Geel (B) and Ghent (B).

Rindus - The Strong Brands!

It is very logical that the DoNarCo Group and Rindus have a strategic alliance : both groups strongly focus on excellent and fast service, supported by strong technical knowledge and representation of Premium, European brands. No wonder that all Premium brands have teamed up with us. We are not just resellers for these brands, but Premium Distributors. Take SKF, for example, of which Rindus is the highest category of distributor, the "Authorized Distributor". We are proud of that, because it was 25 years ago that another company in the highest category, in the Benelux, was admitted. That's because we know what we're talking about and don't just sell you a box with a barcode on it.

www.rindus.eu

Rindus - Workshop & Service

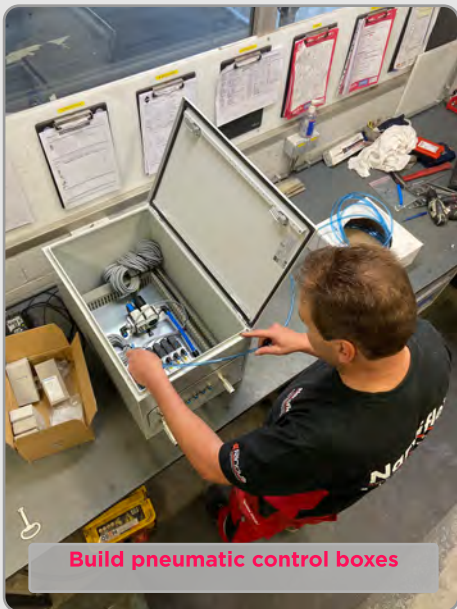

Rindus has its own technicians and also engages the mechanical (COPS) technicians from Narviflex, both in its workshop, such as assembling pneumatic control boxes, revision of motors and reducers, assembling motor reducers and installing bearing blocks on site or complete revision of bottling lines in breweries.

Revision of bottling lines

Electric / Mechanical maintenance works

Build pneumatic control boxes

Mounting & Alignment of bearings - In workshop or on site

Pulleys with mounted bearing blocks

Workshop for motors, reducers and drum motors

On-Site Installation - Urgent

Production lines and conveyor belts come to a standstill, just when they don't have to. The DoNarCo group has 150 technicians spread throughout the Benelux, from Eemshaven (NL) to Arlon (B), supported by an organised service and planning team and an enormous stock, to help you 24 hours a day, seven days, on seven.

PVC/PU Lightweight Belting up to width 3200 mm

Rubber Conveyor Belting up to 3000 mm wide

Steel Cord Belting - Few companies can do this

Day and Night - 7 days in a week

Own crane trucks available

Service teams available everywhere

On-Site Installation - Scheduled

In addition to our interventions, we of course also replace and do preventive maintenance on conveyor belts. But we also replace elevator belts, modular belting, install scrapers, replace motors, lag chutes, etc. Many customers outsource their entire conveyor belting or mechanical maintenance to us, which usually means that there are no more urgent interventions or unforeseen downtimes.

Replacement of Elevator Belting

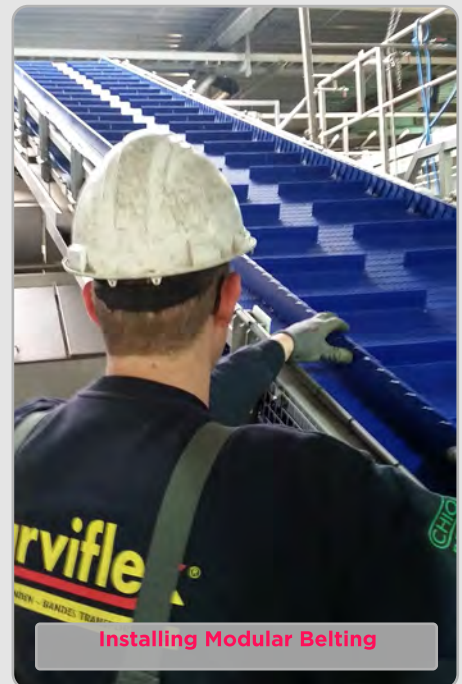

Preventive belt replacement during shutdowns

Revision of Production Lines

Replacement of Motors

Installing Modular Belting

Mechanical jobs, such as installing scrapers, adjusting chutes, shortening / lengthening installations, etc.
