THE BLANCHER 2.0

Dutch TecSource

introduces the screw blancher 2.0, offering improved reliability, lower maintenance, and reduced product breakage. After extensive field testing, it's now time for the next generation **DTS blanchers**.

THE BEST QUALITY

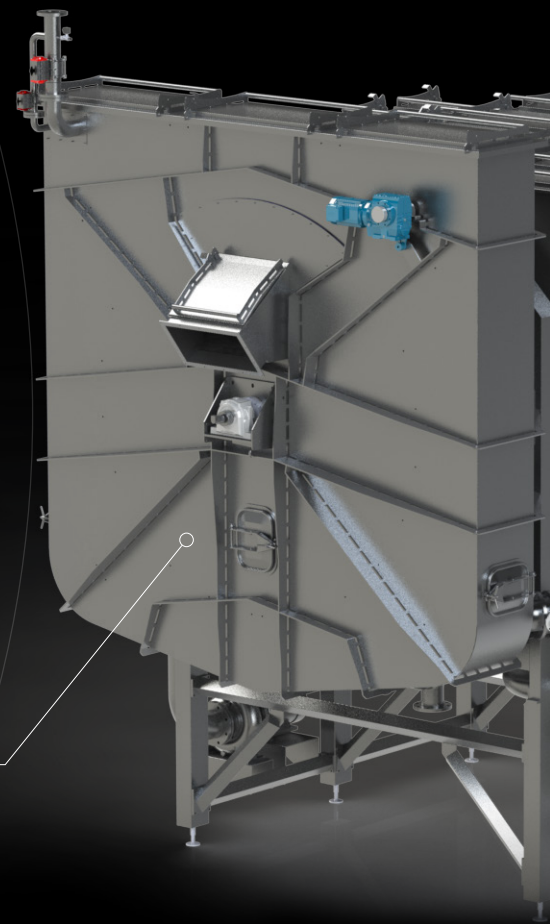

Renewed generation of DTS screw blanchers offer unmatched reliability and lower maintenance costs

DTS, the leader in blanching, cooling, and cooking technologies, proudly introduces the improved screw blancher 2.0. With reduced product breakage, enhanced reliability, and lower maintenance, it's ready for the market after extensive testing.

1.5 years of testing for maximum reliability

Before launching the new screw blancher, DTS tested it for 1.5 years in real production environments. These tests ensured **optimal performance, reliability, and productivity**, even with sensitive products like twister fries, 6x6 mm fries, and waffles under 24/7 high-capacity production.

Next generation ferris wheel

Main key points include:

- + No more need for a product guide plate
- + Improved bearing construction
- + Modified seals.

Reduction of product breakage and maximum reliability

One of the biggest breakthroughs of the new DTS screw blancher is the significant reduction in risk of product breakage. Thanks to optimised mechanical components, the risk of product damage during blanching has been drastically reduced.

Extensive testing ensured a more reliable blancher with significantly lower maintenance needs.

Lower costs of ownership

Due to its robust construction and improved technical specifications, the updated DTS screw blancher requires less maintenance than previous models. The design has been optimised to reduce wear and tear and minimise the risk of technical failures.

'Our customers will experience that they need to spend less time on machine maintenance. This is a game changer for companies looking for more efficient, sustainable and reliable solutions.'

This ensures:

- + Lower downtime
- + Reduced maintenance costs
- + Increased productivity

Future developments

The introduction of the improved screw blancher 2.0 is just the start of DTS' vision to launch innovative solutions in the future. DTS continues to invest in research and development to enhance efficiency, durability, and reliability in the food industry.
