Sliver remover

Discover Kiremko Quality

The Kiremko sliver remover removes more than 98% of all the slivers from your product. Pieces you do not want to see in your final product are removed from potato processes like French fry sticks, dice, wedges and slices. The machine is completely made of stainless steel and maintenance-free, thanks to the hermetically sealed driven rollers and the unique integral scissor adjusting device. The sorting size is easily adjustable.

Efficiently and effective

The well-thought and proven transverse roller principle ensures the best sorting result. Not only most of the slivers will be removed, you will not lose any of your good product. The stainless steel sorting rollers have a unique groove profile. The diameter of the rollers and their rotational speed ensure an optimal sorting result. The product moisture together with the light haze water spray ensure a self-cleaning effect of the sorting rollers. Therefore the water consumption stays extremely low.

More than 98% of the slivers will be removed and none of your product is lost.

You cannot and will not do without a sliver remover.

Durable and maintenance-free

The machine is maintenance-free, because the drives are mounted inside the closed sorting rollers. Thanks to a sophisticated use of plastic bearings and the lack of chains and chain wheels mean that lubrication is not needed. The adjusting mechanism is continuously adjustable from 3 to 16 mm clearance opening. The completely open construction ensures that the machine is very easy to clean.

Maintenance-free and easy to adjust and to clean.

Reliable and versatile

Among other things, the Kiremko sliver remover is suitable for French fry sticks, dice, mini potatoes, slices, and wedges. In addition to reliability the machine is provided with variable settings making it versatile in all its applications. The water and energy use is low, so the return on investment for the sliver remover is short.
